

Electronic Health Record Resources for Age-Friendly Health Systems: Epic

4Ms Strategy Handbook for Implementation in Epic

This document guides you through the decision-making and set-up recommended for creating tools that are dedicated to supporting your organization with assessing and addressing a set of four evidence-based elements of high-quality care known as the 4Ms— What Matters, Medication, Mentation, and Mobility — for an aging population. It is best suited for technical staff at your organization that manage implementation into your electronic health record (EHR) system.

Webinar: Epic for Age-Friendly Health Systems

This webinar reviews the recommendations from a committee of organizations using Epic who have incorporated the 4Ms into their workflows to care for older adults. It also reviews the design for a new 4Ms summary report in Epic's Foundation System. This discussion is primarily intended to support IT analysts, focusing on how to configure Epic to support the 4Ms workflows. Clinicians who are working specifically on age-friendly interventions may also be interested.
